

Price List

Valid as of 2022-04-01

You may order and pay in EUR or USD, but the price will be based on the exchange rate, which will be updated on a regular basis. As a service to our customers indicative prices in EUR and USD are shown in the two right-hand columns. Actual prices are based on the prices in SEK. This may lead to slight discrepancies between the price at the time of order and that at the time of order confirmation. We ask for your understanding in this matter.

In almost all kits and reagents, the number of tests per kit is calculated based on using all the reagent (no dead volumes, etc.) and microplate use. The use of cuvettes yields 4 or 5 times less tests per kit depending on the product. This also applies to standard and blanks. Also see Notes below.

Notes:

- a For this product, just an application for cuvettes is available and the number of tests/kit is calculated based on pipetting accessing all reagents. Standard and blanks are regarded as tests.
- b Does not include swabs nor cuvettes
- c For dispensing luminometers.
- d Contains 266-113 ATP Hygiene Reagents (similar to 266-221 ATP Hygiene Kit HS) but also swabs, small cuvettes (microtubes), tips and even a pipette. The only item not included is a luminometer. The swabs are flat making swabbing much easier and more reliable. Intended for testing of medical devices, food contact surfaces and general cleaning control.
- e The most sensitive ATP Reagent on the market.
- f Subject to fluctuations of exchange rate JPY/SEK
